CTRL-FUEL™ Remote Wet Stock Monitoring

Welcome to the future of wet stock management with the CTRL-Fuel.

Our innovative device revolutionizes how you monitor and manage fuel, oil, water, and more, ensuring efficiency, accuracy, and peace of mind.

A drop-in replacement for Veeder Root DIS-50/51 remote displays, the CTRL-Fuel allows tanker delivery drivers to view alarms, product levels, safe fill levels and ullage, without entering a store or kiosk to view the ATG

Versatile Monitoring

CTRL-Fuel connects to a range of automatic tank gauges (ATG) including Veeder Root, Frankin, Fafnir and ProGauge, as well as Clarksons own CTRL-Kora monitoring solution.

Capable of monitoring various liquids, including fuel, oil, and water, giving a comprehensive oversight of your wet stock for site staff, tanker delivery drivers as well as remote monitoring of wetstock via Clarksons Coppertree dashboard

Simple clear custom display

Full color 7" touch screen display in compact plastic case, allows clear visual display of key liquid levels on any site. Elements and style are fully configurable

By clearly showing Ullage to reach safe fill levels, in real time, it maximizes fuel delivery while reducing overfills and costly incorrect product delivery.

The CTRL-Fuel display can be left on 24/7, or configured to sleep and wake on proximity (through glass) or via a button/timer

CTRL-Fuel connects to a range of devices on a site via Ethernet, Wi-fi, Modbus and Serial connections to display tank data.

Data can be securely transmitted to Clarksons Coppertree cloud dashboard ensuring confidentiality and reliability of data including estimated number of days of supply and flow rates.

CTRL-Fuel handles all ATG alarms, ensuring that critical alarm conditions are quickly identified and dealt with by routing to the right people.

Remote view

Access real-time data and analytics through the Coppertree user-friendly cloud portal, providing valuable insights for informed decision-making including knowing when deliveries are required and performance issues on site

Customizable Alerts

Set customized alerts both on screen and remotely to receive notifications about important events on site. Allows proactive measures and optimized operations.

Experience the next generation of wet stock management with CTRL-Fuel.
